

# YouTube Faceless Automation Blueprint

**OVERVIEW** This document summarizes the YouTube Shorts automation system, including quota calculations, faceless content strategy, and multi-project API rotation architecture. **QUOTA STRUCTURE** • Default YouTube Data API v3 quota: 10,000 units/day per project • Upload cost per video: ~1600 units • Maximum uploads per project per day: ~6 Target: 50 Shorts per day Required quota:  $50 \times 1600 = 80,000$  units/day Projects required (free tier): 8–9 projects **SCALING STRATEGY** Option 1: Request 100,000 units/day quota increase (cleanest) Option 2: Use multiple Google Cloud projects and rotate credentials Option 3: Hybrid method (browser upload + API metadata edits) **FACELESS CHANNEL STRATEGY** • High-volume Shorts production • Rotating titles, hooks, and descriptions • Randomized posting intervals • Avoid repetitive metadata patterns • Stagger uploads to reduce automation detection **PROJECT ROTATION LOGIC (PYTHON EXAMPLE)**

```
projects = [
    {"name": "project_1", "quota_used": 0},
    {"name": "project_2", "quota_used": 0},
    {"name": "project_3", "quota_used": 0},
    {"name": "project_4", "quota_used": 0},
    {"name": "project_5", "quota_used": 0},
    {"name": "project_6", "quota_used": 0},
    {"name": "project_7", "quota_used": 0},
    {"name": "project_8", "quota_used": 0},
    {"name": "project_9", "quota_used": 0}
]

UPLOAD_COST = 1600
MAX_DAILY_QUOTA = 10000

def get_available_project():
    for project in projects:
        if project["quota_used"] + UPLOAD_COST <= MAX_DAILY_QUOTA:
            return project
    return None

def upload_video():
    project = get_available_project()
    if not project:
        print("All projects exhausted for today.")
        return

    # Perform upload with this project's credentials
    project["quota_used"] += UPLOAD_COST
    print(f"Uploading using {project['name']}")

# Example: Upload 50 videos
for i in range(50):
    upload_video()
```

This structure allows scaling to 50 Shorts per day while remaining within free quota limits or transitioning to a higher approved quota per project. End of Blueprint.
